

## Experiment 13: Install a web server and publish a website on internet

### Practical Related Questions:

1. Write steps to change default folder in IIS.

1. Ans:- Start Internet Services Manager, or start the Microsoft Management Console (MMC) that contains the IIS snap-in.
2. Right-click the Web site, virtual folder, or folder whose default document settings you want to configure, and then click **Properties**.
3. Click the **Documents** tab.
4. Click to select the **Enable Default Document** check box. This turns on default document handling for the Web site, virtual folder, or folder that you selected.
5. To add a new default document:
  1. Click **Add**.
  2. In the Default Document Name box, type the name of the default document that you want to add (for example, type *Index.htm*), and then click **OK**.
6. To change the search order priority, click the document that you want to move, and then click the Up or Down button to move the document to the position in the list that you want.
7. To remove a default document, click the document that you want to remove, and then click Remove.
8. Click **OK**, and then quit Internet Services Manager, or the IIS snap-in.

### 2. Differentiate between Internet and Intranet

- Ans:- The **Internet** is a globally-connected network of computers that enables people to share information and communicate with each other.
- An **intranet** is a local or restricted network that enables people to store, organize, and share information within an organization.

**Conclusion:-** We Install a web server and publish a website on internet

## Experiment 14: Publish a website on Internet by acquiring space on hosting site

### Practical Related Questions:

#### 1. define domain

**Ans:-** Domain is the text based address that user like to point to their website.

For example [www.userdomain.com](http://www.userdomain.com).

#### 2. Explain the process of hosting website on Internet.

**Ans:-**

1. Create 'Gmail ID' for which you want to create a website.
  2. Go to 'blogger.com'.
  3. Sign in.
  4. Either choose 'G+ account' or 'a blogger limited account' and click on 'continue to blog'.
  5. Click on 'create new blog'.
  6. Enter 'Title', 'Address', and choose 'Theme' (e.g. Contempo) for your website for that page and click on 'Create Blog'.
  7. **Click on Test**. It's next to the blog title that appears below the word "Blogger" in the upper-left corner of the window.
  8. **Select a blog**. In the drop-down menu, click on the title of the blog to which you'd like to add a page. It will be in either the "Recent blogs" or "All blogs" section.
  9. **Click on Pages**. It's on the left side of the window, in the first section of the menu.
  9. **Click on New page**. It's a gray button near the top-center of the window.  
**Title your page**. Do so in the "Page title" field at the top of the window.
  10. If you prefer to compose in or edit the page's HTML code, click on **HTML** in the upper-left of the window.
  11. To save your work as you go or a draft of your page, click on **Save** in the upper-right part of the window.
- Click on Publish**. It's in the upper-right part of the window. This takes your new page live on your blog.

### **3.Difference between Interactive and Non interactive**

Ans: Interactive Mode means that you can use the web page like normal navigating. You can type into it, click on links, etc. Ex.Facebook.com

Non-Interactive Mode means it does not allows user to interact with it.ex:www.pcpolytechnic.com

Conclusion:- We Publish a website on Internet by acquiring space on hosting site
