

Experiement8: Insert images on webpage using various attributes

Exercise: Design a webpage using images and apply image formatting attributes on it.

Ans:-

```
<!DOCTYPE html>
```

```
<html>
```

```
<body>
```

```
<h2>Image Size</h2>
```

```
<p>Here we specify the width and height of an image with the width and height attributes:</p>
```

```

```

```
</body>
```

```
</html>
```

Output:

Image Size

Here we specify the width and height of an image with the width and height attributes:

Practical Related questions:

1.Explain the tag used to insert image in a web page.

Ans:- tag is used to insert any image on a web page. tag is an unpaired or single tag, i.e. it neednot to be closed. It may contain some attributes denoting the url of the image, height and width of image, and more like that. In HTML, images are defined with the tag.

```

```

2.Name the tag with attribute used to change the size of image.

Ans:- The data size of the image doesn't change even if the size is changed by this attribute.

...

```
<img src="" width="" height="">
```

Attribute	Value	Explanation
width=" "	pixels or %	the size of the width
height=" "	pixels or %	the size of the height

3.Write procedure to insert border to the image

Ans:- Firstly insert the image in a webpage and then use the border attribute to give a border or a specific value to the image.

Use the border property to add a border to an element.

Program:

```
<!DOCTYPE html>
```

```
<html>
```

```
<head>
```

```
<style>
```

```
img {
```

```
border: 5px solid #555;
```

```
}
```

```
</style>
</head>
<body>
<h2>Border Around Image</h2>
<p>Use the border property to add a border to an image:</p>

</body>
</html>
```

Output:

Border Around Image

Use the border property to add a border to an image:

Conclusion:-

We design a web page to insert a image by using various attributes.
